

# Erasmus+ partners wanted!

Our specific objective is to prepare a large-scale Erasmus+ Strategic Partnerships application, to establish our assumptions and to identify prospective partners.

## Our goal

The overall aim of the programme is to support the adaptation to the challenges of ageing and to promote the inclusion of older people, both for older people and families living with older people as well as for the population as a whole.

## We're in a small scale Erasmus+

We are a Hungarian-Maltese partnership looking for good practise in care and care management for elderly people that can adapt to the changing needs of individuals and families, and for partners who are facing major challenges in this area and want to improve in the near future.

## Our experience shows that..

...neither families nor the persons concerned are prepared for the fact that a large number of elderly people will sooner or later need care and assistance, and in these cases, faced with the scarcity of institutional provision, it is up to families to resolve the situation, but they will then face it as a crisis.

## Cooperation is necessary

Together with other professional organisations we want to promote the elderly as an asset to society and to themselves. They must also be able to prepare for the challenges they face, to act as a client and equal partner with service providers and, if necessary, to act together with others to ensure quality services.
